

Make a contribution to the solution.

Help turn renewable resources into electric energy
for as little as **\$4 a month.**

Find out how at www.duke-energy.com/GoGreenKY

Take part in powering a difference.

Duke Energy's GoGreen Kentucky program is dedicated to advancing the development of renewable, environmentally friendly energy sources, such as the sun, wind and organic matter, into electric energy. These advances will offset carbon dioxide in the atmosphere and lessen the demand for fossil fuel generation. And you can help.

As a participant, you can purchase the minimum of **(2) 100 kilowatt-hour (kWh) blocks of green power for \$4/month**. Over a year that equates to approximately 20% of the average customer's electric usage. Beyond this minimum, you can purchase additional 100 kWh blocks of green power for \$2 per month.

The dollar amount of your participation will be added to your monthly Duke Energy bill.
