Florida Custom Incentive Program
Introducing: Web-based Custom Calculators

We now offer a selection of simple online calculators that make estimating your energy savings and incentive amounts easier than ever.

Calculate Energy Savings

Use our calculators – complete with easy-to-use buttons and drop-down menus – to discover your potential energy savings.

Investing in energy-efficient technologies such as HVAC, cool roof, wall insulation and roof insulation makes good business sense. Duke Energy custom incentives help you defray a portion of your costs in implementing these upgrades.

We are offering a new, streamlined application process through our web-based calculators. Applicants receive quick turnaround to potential custom incentives, as well as technical support on project scope and energy-saving ideas.

New Construction Incentive Wizard

We have created a whole-building approach to looking at your new construction plans. We understand the importance of knowing the financial impact of your project, so a calculator wizard has been designed to give you an upfront estimate of your incentive amount. Simply select all of the high-efficiency measures in your new construction design, and the wizard tool will calculate your total incentives for you.

New construction types include:

• Retail
• Schools K-12
• Colleges and universities
• Restaurants
• Hotels and motels
• Offices

Incentive Estimator

An all-in-one, step-by-step custom calculator for designing and selecting energy-efficient equipment and systems that qualify for cash incentives. Find out how much you can save by installing premium energy-efficient lighting, a high-efficiency HVAC or thermal energy storage systems. The incentive estimator will:

• Evaluate savings for single measures
• Handle retrofit and new construction projects
• Give project eligibility based on calculations

Calculate your savings today at duke-energy.com/EnergyCalculator
Visit duke-energy.com/FloridaCustom today to learn more about the program and to fill out an application.

### HOW IT WORKS

1. **Get started**
   Go to duke-energy.com/EnergyCalculator and sign in or create an account.

2. **Calculate your project savings**
   Enter the higher energy-efficient measures you’ve selected.

3. **Pre-apply/Submit application**
   Fill out a pre-application and submit with your calculations all online.

4. **Install***
   Proceed with the installation of your project.

5. **Get paid**
   You have 90 days to request payment after the project has been fully installed.

The simple payback time on the project must be greater than two years after applying the incentive and cannot exceed 50 percent of the incremental project costs.

If you have already completed your project, you are not eligible for a custom incentive.

*The Incentive Estimator requires preapproval prior to installation.*
