Update: Demolition at the Cape Fear Plant

As you may know, we have been decommissioning the Cape Fear Plant with the goal of restoring the site to ground level. This work has been underway since the plant was retired in 2011. Last year, we removed the smokestacks and precipitators, and are now preparing to demolish the remaining structures. The powerhouse and boilers were originally scheduled to be imploded in March, but due to site conditions, this event has been delayed. Once we finalize plans for a new date, we will share details with neighbors in nearby communities. We appreciate your patience.

You can find additional information about our decommissioning program at duke-energy.com/coal-decommissioning and updates about activity at the Cape Fear site at duke-energy.com/power-plants/coal-fired/cape-fear.

Best regards,

Indira Everett
