Important update about upcoming maintenance and site activity at Buck Combined Cycle Station
Dear Buck Station neighbor,

To maintain safe and reliable operation of Buck Combined Cycle Station, we will be performing major maintenance activities this spring, from March 2 through May 5.

During the peak of these maintenance requirements, we anticipate around 150 to 250 additional workers supporting day and night activities. As a result, there will be more traffic than usual on Dukeville Road, especially from 6 a.m. to 8 a.m. and 6 p.m. to 8 p.m. during shift turnovers.

You may also notice an increase in activity at the site as we continue a number of projects to safely close the ash basins and recycle the ash material. We have started building the ash reprocessing unit and are on track to begin excavation and recycling in spring 2020.

Work has started on the new road that will redirect plant traffic off Dukeville Road; however, inclement weather has delayed progress. The current projection is that this roadway will be completed in late March. As soon as the new road is complete, we’ll begin using it for plant traffic.

We appreciate your patience as this important work continues. If you have questions, please feel free to contact me at 704.638.4050 or randy.welch@duke-energy.com.

Thank you,

Randy D. Welch
