For nuclear emergency planning, go to: duke-energy.com/NuclearEP

Siren Test Dates

**Full-volume tests (5-30 seconds)**
- 2018: Oct. 10
- 2019: Jan. 9, Apr. 10, Jul. 10, Oct. 9

**Full-volume test (3 minutes)**
- 2018: Nov. 14
- 2019: Nov. 13

Sirens are tested on Wednesdays.
Dear Neighbor,

At Harris Nuclear Plant, we are committed to producing clean electricity safely and reliably.

With 11 nuclear generating units in the Carolinas, nuclear energy continues to be a vital part of Duke Energy’s generation portfolio. Last year, 52 percent of the electricity we generated in the Carolinas came from carbon-free nuclear energy, and every day our team is committed to ensuring electricity is available when you flip a switch.

Giving back to our community is also important to us. Our employees are honored to work with you and show how much we care by supporting service projects, educational opportunities and environmental protection initiatives. We give time and resources to schools and shelters, conduct blood drives and annual collections of food, school supplies and necessities for mothers and infants in need, and participate in cleanup and beautification projects throughout the year.

We always expect our plant to operate safely, but in the unlikely event of an emergency, we want you to be prepared. The information in this booklet is part of comprehensive emergency plans developed in conjunction with local, state and federal emergency management officials to keep you informed. Please review and familiarize yourself with this information, and keep it in a place you can access in the future.

Thank you for your continued support of Harris Nuclear Plant. We are proud to be your neighbor.

Tanya Hamilton
Site Vice President, Harris Nuclear Plant

Nuclear emergency planning information can be found on Duke Energy’s website, duke-energy.com/NuclearEP. You can also learn more about nuclear energy on the Nuclear Information Center, nuclear.duke-energy.com. And, you can connect with us through our social media channels. Follow us on Facebook, Duke Energy Nuclear Education – @DukeEnergyNuclear and on Twitter @DE_Nuclear.
Siren Tests

Emergency warning sirens are tested regularly to ensure they work properly. Testing is part of normal maintenance. No public action is necessary. The tests take place at specific dates and times (listed below) to minimize inconvenience for plant neighbors.

If you hear sirens and are not sure if it is a test or an emergency, tune to a local radio or television station listed in this booklet. During an emergency, these stations stop regular programming to provide information to the public. It is important to note that sirens may not necessarily be heard inside homes or businesses.

Remember, hearing a siren does NOT mean you should evacuate. Local radio and television stations will provide information and instructions on what to do.

Siren Test Dates

**Full-volume tests (5-30 seconds)**
- 2018: Oct. 10
- 2019: Jan. 9, Apr. 10, Jul. 10, Oct. 9

**Full-volume test (3 minutes)**
- 2018: Nov. 14
- 2019: Nov. 13

Sirens are tested on Wednesdays.

Emergency Alert Stations

These radio stations will participate in EAS announcements in the event of an emergency. If you hear several three-minute-long siren blasts, tune to one of the following stations for information:

- 94.7 WQDR-FM
- 105.1 WDCG-FM
- NOAA Weather Radio – All Hazards

Other radio and television stations also may broadcast information and instructions in an emergency.

Tone Alert Radios

Residents within a 5-mile radius of the Harris Nuclear Plant are given tone alert radios. These radios can be activated by the National Weather Service to notify residents of emergencies, such as severe weather or a problem at the Harris Nuclear Plant.

Always keep the radio plugged in where you can hear the alarm – especially while sleeping. Should the alarm sound, press the WEATHER bar/button on top of the radio to receive instructions. If there is an emergency, you should also tune to a radio/TV station for more details.

The pamphlet you received with your radio explains how it works. If you have questions about your radio, please call our customer service center at 919.508.5400 or 800.452.2777.

Tone Alert Radio Tests

Tone alert radios are tested every Wednesday around noon. To determine whether the alarm is a test or an emergency, press the WEATHER bar/button after the alarm sounds. The message that follows the alarm tells you if it is an emergency or a test. If it is an emergency, the message will tell you what to do.
About These Emergency Plans
This booklet contains important emergency planning information for people who live within 10 miles of our nuclear power plants (also known as the emergency planning zones or EPZs). The information was developed by state and local officials in conjunction with Duke Energy and is updated annually. The booklet provides basic information about radiation and how to prepare for a nuclear emergency. State and county officials and Duke Energy want you to be prepared and to know what to do in the unlikely event of an emergency at one of our nuclear plants. Please review this information and keep it in a place where you can readily find it.

Nuclear Power and Public Safety
Nuclear power plants are designed and operated with an uncompromising commitment to safety and security – and are among the most secure facilities in the world. Our first priority is to ensure the continued health and well-being of the public and our employees. Nuclear plants have:

- Multiple layers of safety systems and structures designed to protect both the plant and the community from the release of radiation
- Reactor safety systems with separate, multiple redundant backup systems to provide additional protection and reliability
- Containment buildings made of reinforced concrete and steel designed to withstand tremendous forces such as hurricanes, tornadoes and even earthquakes
- Plant employees who are highly skilled, very experienced and continuously trained
- Comprehensive emergency plans and procedures that are well-practiced
- Specially trained and equipped security forces that monitor and control access to the plant 24 hours a day
- Comprehensive security plans that are managed by the on-site security force
- Physical security systems, including razor wire, concrete barriers, state-of-the-art intrusion detection systems, sophisticated monitoring systems and more (seen and unseen)

Preparing for an Emergency
It is a good idea to prepare ahead of time for any emergency situation. Your family may not be together when an emergency strikes, so it’s important to discuss what you will do in different situations. Consider details such as how you will get to a safe place, contact each other or get back together. Preparing now will help you respond more quickly in any emergency. The ready.gov website is a good resource to help you create a family emergency plan.
Emergency Kit

Keep an emergency kit in a special place that the whole family can easily locate. Your kit should include important items such as:

- This emergency planning booklet
- Two changes of clothing
- Blankets/sleeping bag
- Toiletries: soap, toothbrush, toothpaste and towels
- Medications
- Baby needs: formula, food and diapers
- Important personal documents, credit cards/checkbook/cash and insurance cards
- Identification
- Portable radio, flashlight, batteries and cellphone/charger
- Bottled water and food for several days

Emergency Notifications

How will I know there is an emergency?

Sirens are the primary outdoor warning system for alerting the public of an emergency. In the unlikely event of an emergency at the nuclear plant, Duke Energy would immediately notify federal, state and local authorities. These authorities could activate pole-mounted sirens located throughout the plant’s 10-mile EPZ.

If you hear a siren and are not sure if it is a test of the system or an emergency, check your booklet for scheduled test dates, and tune in to a local Emergency Alert System (EAS) television or radio station. Hearing a siren does not mean you should evacuate. Follow the instructions provided by emergency management officials, and stay tuned to a local radio or television until the emergency is over.

Local fire, police and emergency officials may patrol affected areas within the EPZ broadcasting information via loudspeakers and/or go door to door to ensure residents are aware of the situation. Officials will use any means necessary (e.g., boats, loudspeakers, etc.) to alert those on waterways and in recreational areas.

Some of your neighbors may need assistance in an emergency. Please check on them and ensure they are aware of the emergency and have emergency plans in place. For those who may require special assistance, please refer to the Special Assistance section of this booklet.
What to Do in an Emergency

If there were an emergency at the nuclear plant, state and county officials would provide information about what actions to take. It is important to stay calm and to follow instructions provided by state/county officials. You may be told to:

Go Inside/Stay Inside

During a security-related or other type of event, state and county officials may tell you to go inside a building (house, office, etc.) and stay there until officials say it is safe to come out. In these types of events, the danger would not be due to radiation, but rather another issue.

Shelter in Place

If there is an emergency at the plant with the possibility of a release of radiation, you may be instructed to shelter in place. Guidelines for sheltering in place include:

1. Go indoors and close all windows and doors. Turn off fans, heating and air conditioning that draw in outside air. Close all air intakes. Place your home or car system in internal recirculation, if possible.
2. Bring your pets inside. To protect livestock, read the Agricultural Information section of this booklet.
3. The food, water and milk supplies already inside your home are safe to eat/drink.
4. If possible, go to a room or basement with no or few windows.
5. Remain inside, and stay tuned to your EAS station (radio/television) for additional instructions from emergency management officials.
6. Send brief text messages – they often get through when networks are overwhelmed. Limit non-emergency calls to conserve battery power and free up wireless networks for vital communications.
7. If you must go outside, place a damp cloth over your nose and mouth to help keep you from breathing in some radioactive material.

Public Actions

If there were an emergency at the nuclear plant, state and county officials would provide information about what actions to take. It is important to stay calm and to follow instructions provided by state/county officials. You may be told to:

1. Go inside and stay inside
2. Shelter in place
3. Evacuate
4. Take potassium iodide (KI)

Based on the event, sometimes staying inside is safer than evacuating. Emergency officials know what is best, so follow their instructions.
Evacuate

Under certain circumstances, people in specific zones might be asked to evacuate. If you need help during an evacuation, contact your county emergency management office listed at the back of the booklet. Evacuation routes and reception centers/evacuation shelters for each zone are listed on pages 11 to 17.

Guidelines for evacuation include:

1. Do not try to take all of your belongings with you. You may be away from home for a few hours or a few days. Pack only critical items like jewelry, cash, financial paperwork/information (e.g., insurance policies), irreplaceable items, etc.

2. Ensure appliances and faucets are off. Lock all doors and windows.

3. If you are unfamiliar with routes to travel, refer to the information on pages 12 to 17.

4. Get into your vehicle and close all windows and vents. Do not use the car's air conditioner or heater unless you can recirculate the air inside. Do not draw in fresh air.

5. As you drive, stay tuned to a local EAS station for more information.

6. Follow the evacuation route to your designated reception center/evacuation shelter. If you are not instructed to evacuate, stay off the roads to ensure emergency personnel can readily respond.

7. It is important to go to the designated centers/shelters listed at the back of this booklet to sign in – even if you do not plan to stay there.

   a. These facilities provide guidance related to registration, radiological monitoring and decontamination, assistance in contacting others, directions to congregate care centers, reuniting of families and other general information that may be needed during an evacuation. Congregate care centers provide shelter, food, water, showers/toilets and emergency medical assistance and are typically managed by service organizations such as American Red Cross.

   b. Radioactive contamination on you or your vehicle would be removed by washing. This process is known as decontamination. Decontamination is very important because it reduces radiation exposure to you and others.

   c. You can stay at a designated facility after you register, or you may stay with friends or relatives outside the established restricted area.

   d. Service animals (those trained to benefit people with disabilities) are welcome and will be accommodated at these facilities. For guidance on pets, see page 8.
When Children Are in School

What should I do if my children are in school?

If your children attend schools within the 10-mile EPZ, do not try to pick them up at their schools during an emergency evacuation. Schools will follow their relocation procedures to protect your children’s health and safety. Your children will be cared for at the facility by school and county officials until you arrive.

Review the designated facilities where children would be relocated beginning on page 11. Note: These may be different from the centers/shelters listed for the zone where you live. The chart shows the schools within the 10-mile EPZ, the zones where they are located and the facilities where children would be taken in the event of an emergency.

In the event of a relocation, parents should only pick up students at their designated pickup facilities. Children who live in the 10-mile EPZ and attend a school outside the EPZ will be kept at their schools by school officials until they are picked up by their parents.

If your children are ever left alone, make sure they know what to do in an emergency. Children should know their zone and be familiar with your family plan.

Classification of Emergencies

The Nuclear Regulatory Commission (NRC) defines four emergency classifications that could occur at a nuclear power plant. Duke Energy would contact federal, state and local authorities in each of the following situations:

Unusual Event
This is the least serious of the four emergency classifications and involves a potential minor operational/security event. There is no impact to the public; no public action is needed.

Alert
This is the second in increasing significance and involves an operational/security event that may affect safety at the plant. There is no impact to the public. Emergency officials may prepare emergency centers and will share information with the public as needed.

Site Area Emergency
This is the third in increasing significance and involves a major operational/security event that could affect plant safety. Sirens may sound to alert the public to listen to local radio/television stations for information. Radioactivity levels outside of the plant should not exceed federal guidelines.

General Emergency
This is the most serious of the four emergency classifications and involves a serious operational/security event. Sirens may sound. Emergency officials would take action to protect the public. Local radio/television stations would provide instructions for those in the affected areas. Radioactivity levels outside of the plant may exceed federal guidelines. Those affected may be told to go inside and stay inside, shelter in place, evacuate and/or take potassium iodide (KI).
When Special Assistance Is Needed

What if I need help during an emergency?

If you or your family needs assistance during an emergency, complete and mail the Request for Special Assistance card located in the back of this booklet. This information, which must be updated yearly, assists county officials in meeting your needs. County officials will manage this information in a confidential manner.

You should fill out the special assistance card if you or someone in your home:

- Is hearing impaired and uses TDD equipment or requires assistance with daily activities
- Is confined to bed and requires a caretaker for assistance
- Requires a ventilator (breathing machine)
- Is visually impaired and cannot drive a car
- Has cognitive issues such as loss of memory, speech, judgment, reasoning or emotional control
- Needs a ride and is unable to find one
- Experiences other problems that would require additional assistance during an evacuation

If you have neighbors with special/functional needs, please reach out and help them as needed. Do not pick up individuals in nursing homes, rest homes or hospitals. Officials will care for these individuals and take those needing medical care to hospitals and special-care facilities outside the 10-mile EPZ.

Emergency Planning Zones

If there were an emergency at the nuclear power plant, it is unlikely that everyone within the 10-mile area surrounding the plant would be affected. The areas affected would depend on weather conditions and the nature of the emergency.

Refer to the map on pages 18 and 19. You will see that the 10-mile area around the plant is divided into zones called emergency planning zones (EPZ). Each zone is marked with a letter and/or number designation.

Find the zone(s) where you live, work and/or go to school. By knowing your zone, you can quickly identify if you are in the zone affected by an emergency. For example, people in some zones may be instructed to stay inside or evacuate, while people in other zones may not be affected at all.

Look at the charts on page 11 to 17. Find the reception center/evacuation shelter for your zone(s). Locate it on the map on pages 18 and 19. This is where you would go if you were instructed to evacuate.

Special Assistance

During an emergency, county emergency management officials will assist people who need transportation or who have special/functional needs – in other words, those needing special assistance during an emergency.

If you or someone living in your home needs assistance during an emergency, complete the Request for Special Assistance card.
Pets and Agricultural Information

What should I do with my pet during an emergency?

Pet owners are responsible for the care and well-being of their pets. The best way to protect pets from exposure to radiation is to bring them inside as soon as possible. If evacuating with your pet(s), be aware that special arrangements may be needed to safely accommodate them. When including animals in your family emergency plan, it is important to check with your county emergency management office to determine what measures may or may not be available at your assigned reception center/evacuation shelter. Some counties may arrange alternate holding facilities for pets away from human shelter sites. However, service animals (those trained to benefit people with disabilities) are welcome and will be accommodated at all evacuation shelters. If you must leave pets at home, place them indoors with food and water. Do not give pets potassium iodide unless prescribed by a veterinarian, since KI may be toxic/poisonous to animals. For questions about animal health, always consult your veterinarian. You can find additional guidance at ready.gov.

What about livestock and agricultural products?

When instructed, farmers should be prepared to take the following actions:

1. Monitor and follow instructions provided over the Emergency Alert System (EAS). Specific recommendations for the protection of farm animals and agricultural products will be issued by appropriate state and county officials.

2. Crops and animals raised as food for people or animals should be protected when possible.

3. Remove all dairy animals from pastures, shelter if possible and provide them with stored feed and protected water.

4. Store feed in buildings, or cover with plastic or canvas if it is outdoors. Feed stored in buildings will be protected from contamination.

5. Cover open wells and water tanks.

Special brochures are published by your state to provide additional guidance concerning livestock, crops and gardens. Residents may download or request a copy of this information by contacting their state or local Cooperative Extension office. The web address and contact information may be found on page 34 of this booklet.

Exit Routes During an Evacuation

To find your recommended primary evacuation route, look at the information on pages 12 to 17.

While the indicated route is your recommended route, routes may change based on road conditions, weather and/or construction. To assist you in evacuating the area, updated information and routes would be announced on local radio/TV and through social media. Law enforcement officials also would manage traffic during evacuation events.
About Nuclear Power and Radiation

Radiation is a natural part of our environment. We are constantly exposed to radiation from the world around us – this is called background radiation. Sources of background radiation include the sun, the air we breathe, soil, plants, building materials and even our own bodies. We also are exposed to man-made sources of radiation like medical and dental X-rays, smoke detectors and television sets. Exposure to extremely large amounts of radiation can be harmful, even fatal. The amount of radiation given off in the normal operation of a nuclear plant is very small, smaller, in fact, than the amount of radiation received on a coast-to-coast airplane trip.

Radiation from common sources

Types of Radiation

There are three major types of radiation:

Alpha
The least penetrating type of radiation; cannot penetrate skin; can be stopped by a piece of paper; is an internal hazard if swallowed, breathed in or absorbed.

Beta
Moderately penetrating; can penetrate several layers of skin and sensitive tissue; is a hazard to lens of eyes; can be stopped by a thin piece of aluminum; is a hazard if swallowed or inhaled.

Gamma
Highly penetrating; can travel many feet in air and many inches into human body; is a hazard if swallowed or inhaled; can be stopped by lead, water or concrete.

Protecting yourself from radiation

Nuclear emergency plans are designed to protect you in the unlikely event of an emergency at a nuclear plant. State and local governments have guidelines to address the need for protection from radiation. These guidelines require protective actions for the public at levels far below those that can make you sick. State and local officials would provide instructions to protect you if radiation levels at or above those guidelines were expected.

You can be exposed to radiation/radioactive materials in several common ways:

- In the air or on the ground.
- On skin, hair or clothing – exposure will be reduced by washing off the radioactive material.
- Breathing/swallowing – exposure can be prevented by not consuming food that may be contaminated. Exposure will stop when the radioactive material stops giving off radiation or when your body eliminates it.
How Nuclear Power Plants Make Electricity

Just like plants that burn coal and natural gas, nuclear plants produce electricity by boiling water to create steam, which turns a turbine to produce electricity. The difference is that nuclear plants create the heat needed to boil water through a process known as fission. Fission is the physical process of splitting an atom. To produce heat for a nuclear reaction, atoms of uranium are split.

The uranium in a nuclear reactor is contained in small, hard ceramic pellets placed in long, vertical tubes (fuel pins), which are bundled together to create fuel assemblies. There are numerous fuel assemblies in a nuclear reactor.

Potassium Iodide (KI)

Potassium iodide, also known as KI, is a nonprescription drug. KI may reduce or prevent your thyroid gland from absorbing radioactive iodine and is one protective action that may be recommended during a nuclear emergency.

KI does not block the absorption of any other radioactive material. **KI should only be taken at the direction of public health officials.**

KI is available to residents living within 10 miles of the plant, at no cost, through county health departments. For more information, contact your state or county health department.

KI should be picked up, **before** an emergency, by all those living or working in the 10-mile EPZ. KI is most effective if taken **before** exposure.
