

A STREAMLINED, FULL-SERVICE ELECTRIC VEHICLE CHARGING SOLUTION

The market for electric vehicles is growing rapidly, and drivers want accessible EV charging sites in the places where they work, live and play. But for site hosts, coordinating the right set of service providers to install this valuable amenity can be overwhelming.

Duke Energy One provides a comprehensive, consultative managed service approach to your unique EV charging challenges. Your trusted EV Direct advisor will facilitate all phases of your project solution, from initial consultation through established operation. We will:

Provide consultative assessment to determine the appropriate number of stations, as well as plan for user authentication, payment arrangements, data collection and more.

Manage design, permitting, construction and interface with utilities.

Help ensure maximum system flexibility by leveraging hardware and software that never locks you into a single provider.

Offer road mapping and long-term guidance to minimize cost and hassle as the market, technology and your business develop.

Considering EV charging?

To learn more about installing EV Direct on your premises or about bundling additional non-regulated services and products to support a variety of energy and infrastructure services, contact Duke Energy One at EVDirect@duke-energy.com.

The amenity of a charging station is an attractive feature to consumers, and businesses realize that it is a draw to get people into their areas.* When you make the decision to become one of these host sites, you'll help benefit the environment, your community and your business.
